PROJECTS

Crosshair Sports

- A free to use mobile application created with the intent of helping student athletes get noticed by college coaches.
- Features include the ability to post pictures and videos, direct messaging, push notifications, and the ability to search for users.
- This application was created with Dart, Flutter, and Firebase.

Steelo (UI)

- A user interface of an ecommerce mobile application.
- This project combines aspects of the popular dating app Tinder, with an ecommerce application like Poshmark.
- Instead of users swiping right or left on people, they will be presented with different items of clothing based on their interests.
- This user interface was created with Dart and Flutter.

Food Delivery UI

- Users are able to select nearby restaurants and view their menus.
- Items from the menu can then be added to the user's cart and be available to purchase.
- This user interface was created with Dart and Flutter.

Snake

- Snake is a game where the user controls a snake that attempts to eat the fruit that is on the screen
- As the snake eats the fruit, the user's score will increase and the snake will grow.
- The game ends when the snake that is controlled by the user makes contact with its own tail.
- This project was created using Python and the PyGame module.

Tetris

- A remake of the classic video game.
- This project was created using Python and the PyGame module.
